

Maximizing Your Simulation Investment

Whether you're considering building a new simulation lab or looking for ways to effectively use the equipment you've already purchased, our nationally recognized simulation professionals can offer advice and training so you can maximize your education program.

Simulation has been a cornerstone of Pennsylvania College of Health Sciences since 2007. As 1 of 10 sites to participate in the National Council of State Boards of Nursing landmark study on simulation learning, we know how to effectively use simulation to augment clinical training. We can help you learn from our successes and bypass the pitfalls.

From the Ground Up: Not sure where to start? Our team can help you determine how much space you'll need, what equipment you should consider and how many staff you need to make it all happen.

Scenario Building and Implementation: Our simulation experts can build and implement custom scenarios for you—or teach your team how to build its own scenarios.

Simulation Integration: Have questions about how to incorporate simulation into your existing curriculum? We'll help you find the right balance between classroom, clinical and simulation experiences.

Facilitator Workshops: We offer a variety of workshops, including operations, scenarios, structured debriefing and moulage to increase your team's skills and competency. Workshops are offered in our state-of-the art simulation laboratory or on location.

Sustainability Planning: We'll work with your team to develop five-year purchasing and staffing waypoints that allow you to maximize the use of your simulation space.
